## MACHINERY EYE BDLTS

Maximum blank lengths, either pattern indicated in column (1). Vertical loads are based on a safety factor of 5 to 1 . Variation in quantity: on special items we reserve the right to a maximum $10 \%$ variation for allowances in manufacture.

## Standard Shank Lengths - Plain \& Shoulder Pattern

Working load limits for eye bolts are based on a straight vertical lift in a gradually increasing manner. Angular lifts will significantly lower working load limits (see Shoulder Pattern) and should be avoided whenever possible. If an angular lift is required, a properly seated Shoulder Pattern eye bolt must be used. Loads should always be applied to eye bolts in the plane of the eye, not at an angle to this plane. Angular lifts must never be more than a $45^{\circ}$ pull. For angular lifting see page 23.

| Diameter and Thread | Working Load Limit |  |
| :---: | :---: | :---: |
|  | Straight Pull (X) | $45^{\circ}$ Pull (Y) Shoulder Only |
| 1/4"-20 | 500 | 125 |

| 1-1/2"-6 | 21000 | 4900 |

Plain Pattern

Shoulder Pattern

ANGULAR LIFTS SHOULD BE AVOIDED WHENEVER POSSIBLE.

Drop forged steel. Heat treated after forging. Self-colored, zinc plated, or hot galvanized. Plain or shoulder type, blank or threaded. Threaded will be supplied unless otherwise specified. See additional specifications and dimensions on page 18.

## DRDP FDRGED LIFTING EYES

Drop forged from C-1035 steel, heat treated. Available blank or threaded. Self-colored finish is standard; hot galvanized or other finishes supplied on a special basis. Used in lifting applications where larger eyes are required. When ordering prefix stock number with letter "B"(blank) or "T"(threaded) as required. Loads are based on a safety factor of 5 to 1 . Working loading limits for lifting eyes are based on a straight vertical lift in a gradually increasing manner, and should never be used for angular lifts.
